Morocco E-commerce & Cash-on-Delivery Market 2026

Report ID AR-MA-0412 · Published 14 March 2026 · Region: Morocco

FICTIONAL TRAINING DATA — all companies, figures and sources are invented for a RAG learning exercise

Executive summary

Moroccan B2C e-commerce reached an estimated **MAD 31.4 billion** in gross merchandise value (GMV) in 2025, up 22% year on year. We project **MAD 38.6 billion in 2026**.

Cash on delivery (COD) remains dominant at **64% of online orders** in 2025, down from 71% in 2023, as card and wallet adoption grows in Casablanca and Rabat.

The single biggest cost driver for COD merchants is the **return-to-origin (RTO) rate**, which averaged **27%** nationally and up to 38% for first-time buyers outside the top five cities.

Market size

Year	GMV (MAD bn)	YoY growth	COD share
2023	21.1	18%	71%
2024	25.7	22%	68%
2025	31.4	22%	64%
2026 (forecast)	38.6	23%	60%

Drivers and barriers

Drivers: smartphone penetration above 90%, social commerce on Instagram and TikTok (roughly one in three first purchases starts on social media), and faster last-mile networks in the Casablanca–Rabat corridor.

Barriers: low trust in online payment among older buyers, high RTO rates, and fragmented delivery coverage in the south and in rural areas, where average delivery time is 4.8 days versus 1.9 days in Casablanca.

What reduces returns

Merchants that call or WhatsApp-confirm every order before shipping cut RTO by an average of **9 percentage points** (from 29% to 20%) in our panel of 140 merchants.

AI-assisted order confirmation (automated WhatsApp flows plus address validation) reduced confirmation cost per order from MAD 4.2 to MAD 1.1 among early adopters.

Outlook

> We expect COD to fall below 50% of orders by 2029, but it will remain the default for first-time buyers. Order-management platforms that combine confirmation, courier allocation and RTO analytics are the

> fastest-growing software segment (+41% in 2025).
