GCC Electric Vehicle Charging Infrastructure Outlook 2026

Report ID AR-GCC-0388 · Published 2 February 2026 · Region: Saudi Arabia, UAE, Qatar, Kuwait, Oman, Bahrain

FICTIONAL TRAINING DATA — all companies, figures and sources are invented for a RAG learning exercise

Executive summary

Public EV charging points across the GCC reached **9,850** at the end of 2025. The UAE accounts for 58% of all public chargers.

We forecast **26,000 public chargers by 2028**, driven by Saudi Arabia's EV target of 30% of new cars in Riyadh by 2030 and by fleet electrification (taxis and ride-hailing).

DC fast chargers (50 kW and above) represent 31% of the installed base but 67% of energy delivered.

Installed base by country (end of 2025)

Country	Public chargers	Of which DC fast	Chargers per 1,000 EVs
UAE	5,710	1,690	92
Saudi Arabia	2,480	890	61
Qatar	720	210	88
Oman	430	110	74
Kuwait	330	95	55
Bahrain	180	60	70

Key players

Fictional operators: **VoltSands** (UAE, 2,100 points), **NajmCharge** (KSA, 1,050 points) and **DuneGrid** (regional, 640 points). Utilities still own about 40% of public chargers.

Risks

Grid capacity at highway sites, summer heat derating of chargers (up to 20% lower output above 45°C), and low utilisation outside cities (average 7% vs 18% in city centres).
