Green Hydrogen in North Africa: Project Pipeline 2026

Report ID AR-NA-0420 · Published 5 March 2026 · Region: Morocco, Egypt, Mauritania, Tunisia, Algeria

FICTIONAL TRAINING DATA — all companies, figures and sources are invented for a RAG learning exercise

Executive summary

North Africa's announced green hydrogen pipeline totals **58 GW of electrolysis capacity** across 41 projects, but only **1.2 GW** has reached final investment decision (FID).

Morocco leads by number of projects (14), Egypt by capacity reaching FID (0.7 GW), and Mauritania by the largest single announced project (10 GW, fictional 'Aftout Sun-H2').

Pipeline by country

Country	Projects	Announced capacity (GW)	Reached FID (GW)
Morocco	14	16.5	0.3
Egypt	11	19.0	0.7
Mauritania	6	15.5	0.0
Tunisia	6	4.8	0.2
Algeria	4	2.2	0.0

Cost

Estimated levelised cost of green hydrogen in the region is USD 3.1–4.2 per kg in 2026, expected to fall to USD 2.0–2.6 per kg by 2030 if electrolyser prices keep falling.

Risks

Water availability (desalination adds roughly USD 0.02–0.05/kg), export pipeline and port infrastructure, and uncertain European offtake demand.
